🎓 Education

B.E. Electronics and Communication Engineering, Minor in Finance,
BITS Pilani Hyderabad Campus
09/2021 – 08/2025
Hyderabad, India

Master of Finance (Extension) FinTech (Major), University of Technology Sydney (UTS)
02/2026 – Present
Sydney, Australia
WAM: 86.25 (HD Average)

🧠 Skills

- **Languages:** Python, SQL, TypeScript, JavaScript
- **Backend:** FastAPI, Node.js, SQLAlchemy, JWT, OAuth2
- **Frontend:** React, Next.js
- **Databases:** PostgreSQL, MongoDB, Redis
- **ML:** Scikit-Learn, Hugging Face
- **Infrastructure & Tools:** Docker, Git, Postman, Streamlit, Excel
- **DSA:** Arrays, Two Pointers, Stacks, Linked Lists, Trees, Graphs, Heaps, Backtracking, Binary Search (70+ problems)

👤 Profile

Engineer from BITS Pilani Hyderabad Campus, currently pursuing a Master of Finance (FinTech) at UTS. Built full-stack applications, REST APIs, and automation workflows using Python, FastAPI, React, and TypeScript. Seeking software engineering internships.

📁 Professional Experience

Backend Engineer Intern, Kofuku Idea Labs

08/2024 – 12/2024 | Hyderabad, India

- **Tamil OCR Modules:** Designed preprocessing and postprocessing modules for Tamil OCR using Python and OpenCV, improving recognition accuracy by ~15% on real-world datasets.
- **Financial Email Automation:** Built a full-stack automated email workflow using Streamlit and Gmail API, boosting operational efficiency by 25% and saving ~8 hours per week.
- **Text Classification Models:** Fine-tuned Mistral-7B and Phi-3B using Hugging Face and LoRA, enhancing classification accuracy with category-based datasets and Scikit-Learn.
- **WhatsApp API Integration:** Developed backend integration with WhatsApp Business API using FastAPI, implementing real-time messaging, automation workflows, and webhook handling.

Project Intern, National Atmospheric Research Laboratory (NARL)

05/2023 – 07/2023 | Tirupati, India

- **HF Radar Signal Analysis:** Processed 30 MHz HFR signal data using MATLAB, extracting power spectrum and Signal-to-Noise Ratio (SNR). Automated FFT application and visualization generation for consistent analysis across multiple datasets.

📁 Projects

- **MysticAuth:** 🔑 Authentication and Authorization System built with FastAPI, React, and TypeScript, featuring email/password and Google OAuth2 login, JWT session management, refresh token rotation, Policy-Based Access Control (PBAC), audit logging, Redis + Taskiq async processing, 650+ automated tests with CI validation, and comprehensive documentation.
- **Appointment Scheduling System** 🗓️ : FastAPI + React application with OAuth2/JWT authentication, role-based (RBAC) user workflows (Admin/Doctor/Patient), and Google Calendar + Gmail API integration for scheduling and notifications.
- **Balance Sheet Analysis:** FastAPI + React application integrating yFinance to fetch, store, and manage company balance sheets with secure authentication and APIs for structured financial data access.
- **Secure UPI Gateway (Academic):** UPI simulation with user/merchant modules, QR payments, ledger tracking, and cryptographic security (SHA-256, PBKDF2, AES).
